## Smashing four tips 2019

Smashing Four is an impressive new multiplayer strategy game from Geewa, it's available for Android and iOS devices. In this game, you will be meeting a team of four heroes, there the name, in order to compete in player versus player arenas. There are several arenas available depending on your rank. The higher your rank is, the better the potential rewards you'll get, not to mention bragging rights. The mechanics are simple. You enter the arena with your team, and the goal is to erase the entire enemy team before they do the same to you. The more players you stay over at the end of the game, the more trophies you get. Once you collect a certain number of trophies, you will progress to a higher arena. Do you have what it takes to make it to the top of the leaderboards? Be sure to read our compilation of Break Four cheats, tips and strategies for guaranteed wins!

1. Assemble a balanced team The most important decision you'll make in Smashing Four is who to include in your team. There are currently only a handful of heroes available, but that doesn't mean the decision will be easier. When you start, you get a default line, and it's more or less balanced. However, it will consist of common heroes. You'll want heroes with a higher rarity on your team. The higher the rarity, the better the stats will be. On top of that, heroes who have high rarity get their special skills earlier, if not immediately. Many new players are stumped when they receive their first new hero and want to add him to their current squad. The game's tutorial is very basic, and it mostly only covers struggles. When you get a new hero, you just tap the charts icon at the bottom of the main screen. This will take you to the list of cards. Tap the map of the hero you want to add to your team and look for the Use button. This will then allow you to drag the hero to any member of your current team to have them switch places.
2. Focus on one target to attack in Smashing Four, you need to tap the screen, drag in order to aim and determine power, then release to send your hero flying over the arena. When in a game, make sure you just don't randomly hit which hero is closest to you. Have your heroes focus on just one target as much as possible. Prioritize taking down heroes with high damage like the Assassin. These heroes are usually squishy, so it should be easy to take them out in a few hits. If you're lucky, you can kill them before they get a chance to attack. Attacking tanks first will take forever, giving other heroes plenty of time to hit you back. The primary reason you need to focus on a single target is to cut down on the number of opponents as quickly as possible. Keep in mind that aside from the attacking hero, your character will take additional damage from any other member of the enemy team he bumps into during enemy turn. You want the on it as much as possible. The the chances of attacks from the enemies, the better your chances will be to survive with the whole team intact.
3. Test Drive New Heroes If you play the game, you will eventually get new hero cards. While you may be excited to jump into battle with your shiny new hero, you must first practice with him. Heroes have different sizes, speed and weights. This means they behave differently when you use it in battle. For example, the Giant is a great hero who can easily strike several heroes who are close together, but he's also incredibly heavy and slow. If you target heroes living on the opposite side of the arena, the Giant won't be able to bounce around as much as other heroes would, reducing the chances of dealing with extra harm. Practicing with new heroes will allow you to get a good feel for how they move around the arena. This will help you customize your strategies accordingly. To start a practice match with in-game bots, just tap the charts icon at the bottom of the screen. At the top left of your deck is a practice button. Tap it to start a bot match. You can quit a bot match anytime without consequences, so if you're confident with your new hero, you don't have to finish the game.
4. Practice your goal since the primary mode of attack in this game is by tapping and dragging, goal can be pretty difficult. You'll see lines that will lead you where your character will go, but that doesn't tell you how it will bounce around. Predicting the subsequent paths of heroes and targets will be essential to your victory, especially in higher ranks. One important trick to master is to make enemy heroes bounce toward your other characters. This is usually done by aiming at their sides, instead of directly at them. If your other characters are on the left, you should aim for the right side of the target. This will make them fly to the left. Another trick is to bounce them back at you, but it's usually done when the enemy hero is near the wall.
5. Finish your games When you're still in the first arena, you'll see a lot of players will quit after you kill one of their heroes first. That's because their chances of winning will be lowered by a lot once you have the number advantage. You might think it's a good idea, too, since no one wants to fight a losing battle. Keep in mind, though, that your opponent will win more trophies if he survives the game with a complete team. Try your best to take down as many enemy heroes as you can until the end of the match. If you're lucky, you might get a double murder and win the game.
6. Don't forget to upgrade your heroes upgrade heroes giving them additional stats. The higher the level, the better the stats will be. Unfortunately, upgrading can be costly. You need gold and duplicate cards in order to upgrade a hero. The cost increases as the level goes up, so that's reasonable may be to upgrade as you progress in the game. Just make sure you use you heroes you actually use to save precious gold. As we mentioned before, skills are also unlocked depending on the level of the hero. However, heroes with a higher rarity get earlier skills. General heroes get their skills at level 5. Rare heroes get skills at level 3. However, epic heroes have unlocked their skills from the start. Keep this in mind when choosing which heroes to invest up resources.
7. Check out the store every day when you tap the gold bag icon on the lower left corner of the screen, you'll be taken to the in-game store. This is where you can buy orbs, gold, jewels and most importantly, individual cards. The store sells individual cards for gold, and it's important because you can choose the hero you need. There's a catch, though. The store offers only three specific heroes a day. You'll see one Common, one rare, and one Epic hero. It's a good idea to check it out daily to see if you can get a new hero you like, or even get that last card you need for an upgrade. Keep in mind that the cost of a card will come up for every additional purchase you make for the day. If you're short on gold, you might want to wait for the next rotation before buying additional cards.
8. Save your gems Gems is the premium currency of the game. It's hard to come by if you usually only get one free Gem from every orb you open. Don't waste these gems on speeding things or other frivolous purchases. Hold onto your gems and just spend it on buying herbs in the store. However, the only decision you need to make is how much you need to save. There are three available orbs in store: Royal, Epic, and Ultimate. It costs 270, 580 and 3,000 gen, respectively. We recommend you save until you get 580 gems for the Epic orb. The Royal orb is the cheapest, but it will only guarantee rare cards. You can easily get those by playing normal games. However, the Epic orb guarantees 2-3 Epic cards as well as 16-22 Rare Cards. It will go a long way for your team composition. Ultimate herbs take too long to save for, even if they offer the most number of cards for the price. You can think about purchasing them once you have high-powered team th at not really needing any immediate upgrades.
9. Join an active clan The game has a guild system called Clans. You will need at least 200 trophies to access the clan system, though. We recommend that you search for an active clan once you have 200 trophies because the benefits are great. You can have friendly matches with your clanmates, and even challenge other clans to fight. The main thing about clans, however, is the card request. Once you're in a clan, you can request for specific cards. Keep in mind that you can only request for maps of heroes you already have. You can set up a request every eight hours, and your will fill it out if they have extras. Since players normally only invest in their main four, they often have a of extra cards for other heroes. Those cards can't be sold, so they might as well donate them to those in need. Make sure to give the favor back by donating your extra cards as well. The number of gift cards is visible to all members of the clan, so people will know if you're stingy. You can also create a clan if you like, but it will take more time as it requires 500 trophies. It's better if you join another clan while still saving your trophies. Also keep in mind that it will be harder to request your cards in a starting lineup as you have to wait until you have more members. The only advantages are that you will be the boss of the clan.
10. Claim your Freebies apart from the orbs you earn after fights, you'll be able to get additional freebies from other sources. First, you get a free chest every four hours. You can find it on the left side of the Battle screen. Just tap the treasure cupboard. On the opposite side of the Slag screen is a purple crystal. You can fill it with souls by killing enemy heroes in battle. Once it has 25 souls, you can tap on receiving rewards. The last source of free stuff is the achievements. Tap the sun-shaped medal icon at the top right of the Battlescreen. This will show you the list of accomplishments you can aim for. Achievements often involve only reaching certain milestones such as playing a certain number of games or dealing with a specific amount of damage to enemies. Check the list often to see which ones you're close to getting and prioritizing it. Achievements reward you with both gold and gems, so this is a great way to earn a lot of currency. You're ready now to battle it out in Smashing Four! Don't forget any of the tips and tricks above if you want to make it to the top! Top!
